Advanced Warehouse Management

Introduction

What is supply chain management and Logistics? Supply chain management is a wide range of activities essential to plan, control and execute a product's flow, from raw material procurement, production through distribution to the final customer, in the most cost-effective and streamlined manner possible.

Logistics, on the other hand, is an important function of the supply chain that involves planning and execution capabilities. It is the capability that organizations make use of in order to plan total requirements, which is then communicated to procurement and other functions for sourcing.

Supply chain management includes flow alignment, function integration, process coordination, complex system designing, resource management, etc.

Logistics management is a supply chain management element that is used to meet customer demands through the planning, control and implementation of the effective movement and storage of information, goods and services from origin to destination. These functions are extremely critical to meet the desired objectives and contribute to organizational growth and success.

This training course will empower you with all the knowledge and understanding required to build a successful career in supply chain management.

This course will provide you with the experience, confidence and exposure to handle and successfully manage any process of the supply chain, thereby preparing you for higher roles and responsibilities that will eventually contribute to your career progression.

Further, the knowledge gained through this course is not specific to one organization or industry and can be implemented in other organizations and industries, thus allowing you to expand your professional portfolio into other organizations and industries.

Learning Objectives

The main objective of this Mini MBA in Supply Chain Management and Logistics Course is to empower professionals with—

- complete knowledge, understanding and confidence to successfully undertake and fulfill any role related to logistics and supply chain management
- the perspective and experience to closely review existing processes and practices of the supply chain and suggest as well as drive implementation of suggestions for enhancements
- the confidence, experience and skill to assume higher roles and responsibilities related to supply chain management in any organization or industry, thereby fostering career growth
- the ability and confidence to train other professionals on logistics and supply chain management
- the capabilities and knowledge to contribute to organizational growth through effective processes and practices at each step of the supply chain
- the potential, experience and understanding to organize the seamless implementation of change for

better client satisfaction
- the confidence, experience and skill to overcome all challenges of supply chain management
- the ability to track and improve employee performance and morale
- the foresight and strategic skills to anticipate possible risks and make provisions to handle these to minimize or completely avoid their impact and resultant costs

Training Methodology

Training follows a dual approach—theoretical-cum-practical. The theoretical part of training is delivered through lectures by an expert from the relevant domain, using detailed audio-visual presentations.

The practical aspect of training is ensured through practical assignments and sample projects to trainees. Case study discussions are extremely helpful to draw relevance to the training audience. Experiential learning is also given prime importance.

Benefits for Your Organisation

By professionals undertaking this mini MBA in Supply Chain Management and Logistics course, organizations will benefit in the following ways:

- Experienced professionals to effectively undertake logistics and supply chain management
- Better relationship management with suppliers, investors and vendors
- Increased product quality through increased employee performance and morale
