LTE EPC Architecture Training

Introduction

This course by xcelerate Training Institute offers an in-depth exploration of LTE technology, emphasizing its role in driving the evolution of mobile networks. It delves into the key features and benefits of LTE, providing insights into its potential to transform the telecommunications industry. The course is designed to equip participants with a comprehensive understanding of LTE's architecture, performance, and deployment strategies.

Learning Objectives

Upon completion, participants will gain a solid understanding of LTE technology, its architecture, and key performance indicators. They will be able to evaluate LTE deployment options and identify opportunities for network optimization.

Training Methodology

The course combines theoretical knowledge with practical examples to provide a comprehensive learning experience. Participants will engage in interactive discussions, case studies, and hands-on activities to apply their knowledge.

Benefits for Your Organisation

Organizations investing in this course can expect improved network performance, enhanced customer experience, and increased revenue through efficient LTE deployment.

Benefits for You

Individuals will develop expertise in LTE technology, expanding their career opportunities in the telecommunications industry.

Who Should Attend

This course is designed for engineers, network planners, and business professionals involved in the planning, design, and operation of LTE networks.

Course Outline

Introduction to LTE and EPC

Overview of LTE

- Introduction to LTE technology and its evolution
- Key features and benefits of LTE
- Overview of LTE network components

Understanding EPC Architecture

- Introduction to the Evolved Packet Core (EPC)

- EPC components: MME, SGW, PGW, HSS
- Functional roles of each component in the EPC

Key EPC Components

Mobility Management Entity (MME)

- Functions of the MME in LTE networks
- User plane vs. control plane signaling
- Interaction with other EPC components

Serving Gateway (SGW) and Packet Data Network Gateway (PGW)

- Roles of SGW and PGW in data forwarding
- Handling of user data and sessions
- Policy and charging rules in PGW

User Data and Management

Home Subscriber Server (HSS)

- Overview of HSS and its importance
- User profiles and authentication processes
- Role of HSS in mobility management

Quality of Service (QoS) in EPC

- Understanding QoS parameters and policies
- Implementation of QoS in LTE networks
- Techniques for ensuring service quality

Security and Future Trends

Security in EPC

- Security architecture of the EPC
- Authentication and encryption mechanisms
- Challenges and solutions for securing EPC

Future Trends in EPC Architecture

- Evolving EPC towards 5G Core
- Integration with SDN and NFV
- Future challenges and opportunities in EPC
